**WESTERN CANADIAN COAL SOCIETY
NETWORKING EVENING**

**Guest Speaker: Travis Pastachak
Amec Foster Wheeler**

Make the Most Out of Downhole Geophysics

This presentation provides an overview on commonly run downhole geophysical tools used in coal exploration. Discussion will focus on how existing data may be used to augment the confidence of the coal deposits in grassroots projects to brownfield operations. Two case studies will highlight how downhole geophysical data may be used to help identify and potentially quantify known and unknown risks.
